

How to Color Coordinate Furniture In A Room?

Color coordination for different furniture items can improve the overall appearance of the room. The following pointers can assist you in designing a harmonized furniture layout for a room:

To begin, choose the color of the largest piece of furniture in the space to serve as a guide.

Use a color wheel to help you choose different colors that will complement each other.

Try to choose major furniture items such as sofa & arm chairs, bed & night stands, etc. in same color.

You may pair plain furniture with another piece of furniture with patterned upholstery in a similar color.

Experiment using furniture in same color but different textures such as place velvet upholstered accent chairs next to a leather sofa.

Place accessories in colors that complement the furniture color; you can choose accessories in colors that are opposite to the color of furniture on the color wheel.
